

Chainalysis Reactor Certification

Training and Certification Information

- Know the Most About a Bitcoin Address
- Graph Transactions – Beautifully and Clearly
- Practice with Real World Case Studies
- Confidently Conduct Blockchain Analysis

Chainalysis Reactor Certification

Overview

The **Chainalysis Reactor Certification (CRC)** provides practitioners with the knowledge and skills to analyze and trace transactions on the Bitcoin blockchain. This comprehensive training using Reactor—the tool of choice for investigators, compliance officers, analysts, and regulators—is provided in a small classroom, in-person setting over two days. The CRC training cost is \$999 per person.

Learning Objectives

1. Understand bitcoin transaction fundamentals
2. Conduct transaction analysis
3. Evaluate different categories of actors in the bitcoin ecosystem
4. Apply techniques to identify services on the Blockchain
5. Leverage open source intelligence (OSINT)
6. Trace funds source and destination

Prerequisites:

- Reactor Essentials training and/or active Reactor usage
- Basic understanding of Bitcoin transactions

Exam details

- 100 Multiple choice questions
- 2.5 hours
- Open notes
- Passing score of 75% or better

Upon completion, practitioners will be able to apply practical techniques to derive actionable intelligence from the blockchain using **Chainalysis Reactor**.

Review of Introductory Training

- Bitcoin Transactions & Chainalysis
- Reactor Fundamentals
- Building graphs

Analytical Techniques:

- Isolating Deposit Addresses
- Transaction Analysis & Cluster Merges
- Subpoena request and response

Analytical Techniques:

- Data Export
- Peel Chain Analysis
- Attribution Strategies
- Identifying mixers

CRC Exam:

- Preparation
- Administration
